

Blinkit Sales Report Analysis

Prepare By: Arpit Kumar Singh

Tools Used: Google sheets, Excel, Pivot Tables, Data cleaning, Correlation Analysis.

Business Objective-

The purpose of this analysis was to answer the following business questions:

- What is the Total sales Revenue ?
- Which product categories generate the highest revenue?
- Which product attributes influence revenue performance?
- Do customer ratings impact sales?
- Does product visibility influence purchasing behavior?

The findings aim to support inventory planning, outlet expansion strategies, and product portfolio optimization.

Key Findings

Finding 0: Overall Business Performance

Total sales Revenue

The dataset generated a total revenue of:

Rs 12,01,681.49

Finding 1: Fruit and Vegetables are the largest Revenue Contributor

Fruit and Vegetables generated **Rs 178124.08** in revenue, representing 14.82% of total sales.

In contrast, Seafood generated the lowest revenue at Rs 9,077.87.

Business Implication:

The category consistently outperforms other product segments and acts as primary revenue driver within the business.

Finding 2: Household Products Generates the Highest Average Sales

Although Household products do not generate the highest overall revenue, they achieved the highest average sales value per item **Rs 149.42**.

Business Implication:

Household Products appear to provide stronger value per transaction and may represent opportunities for premium product positioning.

Finding 3: Supermarket Type 1 Dominates Revenue Generation

Supermarket Type 1 generated **Rs 7,87,549.89** in revenue, accounting for 65.54% of total sales.

Supermarket Type 2 achieved the highest average sales value at Rs 141.67.

Business Implication:

The majority of revenue is concentrated within a single outlet format, indicating that this model is highly effective at generating sales.

Finding 4: Tier 3 Location Generates the Highest Revenue

Tier 3 outlets generated **Rs 4,72,133.03** in revenue, contributing **39.29%** of total sales.

Tier 2 locations recorded the highest average sales performance.

Business Implication

Tier 3 markets appear to be a major source of revenue and may represent attractive expansion opportunities.

Finding 5: Low Fat Products Drive Customer Demand

Low Fat products generated **Rs 776,319** in revenue, representing 64.60% of total sales.

SUM of Sales

Business Implication

Consumer demand is significantly stronger for Low Fat products compared to Regular Fat alternatives.

Finding 6: Customer Satisfaction Does Not Necessarily Drive Revenue

The highest rated category was **Meat** with an average rating of **4.02**.
However, the highest revenue generating category was Fruit and Vegetables.

The correlation between Rating and Sales was:

0.0113

Average Rating By Item type

Business Implication

Customer ratings alone are not reliable predictors of revenue performance.

Products can generate significant revenue without necessarily achieving the highest customer ratings.

Finding 7: Product Visibility Has No Meaningful Impact on sales

The correlation between Item Visibility and sales was:

-0.00028

Business Implication

Higher Visibility does not necessarily result in higher sales.

Other factors such as category demand, outlet type and customer purchasing behaviour appear to have a stronger influence on sales performance.

Strategic Recommendations

1. Strengthen High- Revenue Categories

Fruit and vegetables contribute the highest revenue and should remain a priority for inventory planning and promotional campaigns.

2. Evaluate Tier 3 Expansion Opportunities

Since Tier 3 locations generate the highest revenue contribution, management should investigate operational and demographic factors supporting their performance.

3. Expand Low Fat products

Given the strong demand for low Fat products, Blinkit should consider expanding product variety and targeted promotion within this category.

4. Study High-performing Outlet Formats

Supermarket Type 1 contributes nearly two-third of total revenue.

Understanding the operational drivers behind this performance may help improve other outlet formats.

Conclusion :

The analysis identified **Fruits & Vegetables**, **Supermarket Type 1 outlets**, **Tier 3 locations**, and **Low Fat products** as the strongest contributors to Blinkit's overall revenue performance.

Correlation analysis further demonstrated that **customer ratings** and **product visibility** have minimal influence on sales outcomes. Revenue generation appears to be driven primarily by **product category**, **outlet characteristics**, and **customer demand patterns**.

These findings provide valuable insights for inventory planning, outlet expansion decisions, and future business strategy development.
